Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT On Dec 1, 2000 this sequence version replaced gi:336167.
Draft entry and sequence in computer readable form for [1],[2],[4],[3] kindly provided by E.Castle, 12-NOV-1985. The West Nile viral genome consists of a 42S viral RNA. The amino-terminal ends of the structural proteins were experimentally determined. An 'atg' codon is located at positions 142-144, which could be used for an alternative initiation of translation for V2. The carboxy-terminal ends of the proteins reported here were not yet precisely defined.

  TITLE     Direct Submission
  JOURNAL   Submitted (11-APR-2002) Berkeley Drosophila Genome Project,
            Lawrence Berkeley National Laboratory, One Cyclotron Road,
            Berkeley, CA 94720, USA
COMMENT     Sequence submitted by:
            Berkeley Drosophila Genome Project
            Lawrence Berkeley National Laboratory
            Berkeley, CA 94720
            This clone was sequenced as part of a high-throughput process to
            sequence clones from Drosophila Gene Collection 1 (Rubin et al.,
            Science 2000). The sequence has been subjected to integrity checks
            for sequence accuracy, presence of a polyA tail and contiguity
            within 100 kb in the genome. Thus we believe the sequence to
            reflect accurately this particular cDNA clone.  However, there are
            artifacts associated with the generation of cDNA clones that may
            have not been detected in our initial analyses such as internal
            priming, priming from contaminating genomic DNA, retained introns
            due to reverse transcription of unspliced precursor RNAs, and
            reverse transcriptase errors that result in single base changes.
            For further information about this sequence, including its location
            and relationship to other sequences, please visit our Web site
            (http://fruitfly.berkeley.edu) or send email to
            cdna@fruitfly.berkeley.edu.

  TITLE     Direct Submission
  JOURNAL   Submitted (26-SEP-1998) Drosophila Genome Center, Lawrence Berkeley
            Laboratory, MS 64-121, Berkeley, CA 94720, USA
COMMENT     On Jul 30, 1999 this sequence version replaced gi:5630036.
            For further information about this sequence, including its location
            and relationship to other sequences, please visit our sequence
            archive Web site (http://www.fruitfly.org/sequence/) or send email
            to bdgp@fruitfly.berkeley.edu. All contigs in this submission meet
            the following cutoffs: length >= 200 bases. P1 library location:
            25-32.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 68 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1      343: contig of 343 bp in length
            *     344      423: gap of unknown length
            *     424     1169: contig of 746 bp in length
            *    1170     1249: gap of unknown length
            *    1250     2094: contig of 845 bp in length
            *    2095     2174: gap of unknown length
            *    2175     3405: contig of 1231 bp in length
            *    3406     3485: gap of unknown length
            *    3486     4245: contig of 760 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (02-AUG-1999) Drosophila Genome Center, Lawrence Berkeley
            Laboratory, MS 64-121, Berkeley, CA 94720, USA
COMMENT     On Jun 7, 2001 this sequence version replaced gi:6598705.
            Sequence submitted by:
            Berkeley Drosophila Genome Project
            Lawrence Berkeley National Laboratory, MS 64-121
            Berkeley, CA 94720
            This sequence was assembled using end sequences from a whole genome
            shotgun and from subclones of this BAC and its neighboring clones.
            For further information about this sequence, including its location
            and relationship to other sequences, please visit our sequence
            archive Web site (http://www.fruitfly.org/sequence/) or send email
            to bdgp@fruitfly.berkeley.edu.

  TITLE     Direct Submission
  JOURNAL   Submitted (15-MAY-2004) Berkeley Drosophila Genome Project,
            Lawrence Berkeley National Laboratory, One Cyclotron Road,
            Berkeley, CA 94720, USA
COMMENT     Sequence submitted by:
            Berkeley Drosophila Genome Project
             Lawrence Berkeley National Laboratory
            Berkeley, CA 94720
             This clone was sequenced as part of a high-throughput process to
            sequence clones from Drosophila Gene Collection (Rubin et al.,
            Science 2000, Stapleton et al., Genome Biology 2002). The sequence
            has been subjected to integrity checks for sequence accuracy,
            presence of a polyA tail and contiguity within 100 kb in the
            genome. Thus we believe the sequence to reflect accurately this
            particular cDNA clone. However, there are artifacts associated with
            the generation of cDNA clones that may have not been detected in
            our initial analyses such as internal priming, priming from
            contaminating genomic DNA, retained introns due to reverse
            transcription of unspliced precursor RNAs, and reverse
            transcriptase errors that result in single base changes. For
            further information about this sequence, including its location and
            relationship to other sequences, please visit our Web site
            (http://fruitfly.berkeley.edu) or send email to cdna@fruitfly.org.

            Genetics, Washington University, St. Louis, MO 63110, USA. E-mail:
            jes@sanger.ac.uk or rw@nematode.wustl.edu E-mail: worm@sanger.ac.uk
COMMENT     Coding sequences below are predicted from computer analysis, using
            predictions from Genefinder (P. Green, U. Washington), and other
            available information.
            Current sequence finishing criteria for the C. elegans genome
            sequencing consortium are that all bases are either sequenced
            unambiguously on both strands, or on a single strand with both a
            dye primer and dye terminator reaction, from distinct subclones.
            Exceptions are indicated by an explicit note.
            IMPORTANT:  This sequence is NOT necessarily the entire insert of
            the specified clone.  It may be shorter because we only sequence
            overlapping sections once, or longer because we arrange for a small
            overlap between neighbouring submissions.
            For a graphical representation of this sequence and its analysis
            see:- http://wormbase.sanger.ac.uk/perl/ace/elegans/seq/sequence?
            name=C48D5
            For a graphical representation of this sequence and its analysis
            see:- http:
            IMPORTANT: This sequence is not the entire insert of clone C48D5.
            It may be shorter because we only sequence overlapping sections
            once, or longer because we arrange for a small overlap between
            neighbouring submissions.
            The true left end of clone C48D5 is at 1 in this sequence. The true
            right end of clone C48D5 is at 4074 in
            sequence Z48241.
            The true left end of clone C32A3 is at 38267 in this sequence. The
            true right end of clone C54C6 is at 6823 in this sequence. The
            start of this sequence (1. .102) overlaps with the end of sequence
            Z77131.
            The end of this sequence (38269. .38370) overlaps with the start of
            sequence Z48241.

  TITLE     Direct Submission
  JOURNAL   Submitted (14-DEC-1999) European Drosophila Genome Sequencing
            Consortium
COMMENT     This is a 'working draft' sequence.  It currently
            consists of 72 contigs. The true order of the pieces is not known
            and their order in this sequence record is arbitrary. Gaps between
            the contigs are represented as runs of N, but the exact sizes of
            the gaps are unknown. This record will be updated with the finished
            sequence. 1      804: contig of 804 in length
            805      904: gap of unknown length
            905     1882: contig of 978 in length

  JOURNAL   Submitted (27-MAR-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GXIO
                Center clone name: CH230-415F9
            -------------- Summary Statistics
                Sequencing vector: Plasmid;
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 79728 bases at least Q40
                Consensus quality: 87114 bases at least Q30
                Consensus quality: 92707 bases at least Q20
                Estimated insert size: 83322; sum-of-contigs estimation
                Quality coverage: 1x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 44 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1528: contig of 1528 bp in length
            *     1529     1628: gap of unknown length
            *     1629     2865: contig of 1237 bp in length

  AUTHORS   McCombie,W.R., de la Bastide,M. and Palmer,L.
  TITLE     Direct Submission
  JOURNAL   Submitted (04-SEP-2002) Genome Research Center, Cold Spring Harbor
            Laboratory, 500 Sunnyside Blvd, Woodbury, NY 11797, USA
COMMENT     On Sep 4, 2002 this sequence version replaced gi:19033430.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest.
            Clone OSJNBa0061H20 overlaps clone OSJNBa0011A24 from base 120764
            to base 135874.  The overlap is from base 1 to base 15106 on
            OSJNBa0011A24.

COMMENT     On Jan 1, 2002 this sequence version replaced gi:6997261.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
```

the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jul 23, 2002 this sequence version replaced gi:6997287.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: DRJG
                Center clone name: RP98-46E23
            -------------- Summary Statistics
                Sequencing vector: Plasmid;
                Sequencing vector: M13;
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 254374 bases at least Q40
                Consensus quality: 258931 bases at least Q30
                Consensus quality: 271567 bases at least Q20
                Estimated insert size: 222216; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
```

```
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     9673: contig of 9673 bp in length
            *     9674     9773: gap of unknown length
            *     9774    12080: contig of 2307 bp in length
            *    12081    12180: gap of unknown length
            *    12181    14308: contig of 2128 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (05-MAY-2003) The Institute for Genomic Research, 9712
            Medical Center Dr, Rockville, MD 20850, USA
COMMENT     This is the pseudomolecule for rice chromosome 10, which was
            constructed by resolving discrepancies between overlapping BACs,
            trimming the overlap regions, and linking the unique sequences to
            form a contigous sequence. Genes in individual BAC clone were
            identified by a combination of several methods: Gene prediction
            programs, searches of the complete sequence against a peptide
            database and EST databases. Genes with similarity to other proteins
            are named after the database hits. Genes without significant
            peptide similarity but with EST similarity are named as  unknown
            proteins. Genes without protein or EST similarity, that are
            predicted by more than two gene prediction programs over most of
            their length are annotated as  hypothetical  proteins. Genes
            encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy,
            http://genome.wustl.edu/eddy/tRNAscan-SE/).

  TITLE     Direct Submission
  JOURNAL   Submitted (19-AUG-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Aug 12, 2002 this sequence version replaced gi:22203851.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Drafting Center Code: BCM
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: HBMW
                Center clone name: RP11-238N18
            -------------- Summary Statistics
                Sequencing vector: Plasmid;
                Sequencing vector: M13;
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 337507 bases at least Q40
                Consensus quality: 348039 bases at least Q30
                Consensus quality: 356589 bases at least Q20
                Estimated insert size: 296681; sum-of-contigs estimation
                Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 44 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2152: contig of 2152 bp in length
            *     2153     2252: gap of unknown length
            *     2253     4258: contig of 2006 bp in length
            *     4259     4358: gap of unknown length
            *     4359     6411: contig of 2053 bp in length
            *     6412     6511: gap of unknown length
            *     6512     8661: contig of 2150 bp in length
            *     8662     8761: gap of unknown length
            *     8762    11170: contig of 2409 bp in length
            *    11171    11270: gap of unknown length
            *    11271    13312: contig of 2042 bp in length
            *    13313    13412: gap of unknown length
            *    13413    16522: contig of 3110 bp in length
            *    16523    16622: gap of unknown length
            *    16623    19568: contig of 2946 bp in length
            *    19569    19668: gap of unknown length
            *    19669    22712: contig of 3044 bp in length
            *    22713    22812: gap of unknown length
            *    22813    24848: contig of 2036 bp in length
            *    24849    24948: gap of unknown length
            *    24949    27526: contig of 2578 bp in length
            *    27527    27626: gap of unknown length
            *    27627    30540: contig of 2914 bp in length
            *    30541    30640: gap of unknown length
            *    30641    33101: contig of 2461 bp in length
            *    33102    33201: gap of unknown length
            *    33202    35514: contig of 2313 bp in length
            *    35515    35614: gap of unknown length
            *    35615    38694: contig of 3080 bp in length
            *    38695    38794: gap of unknown length
            *    38795    41624: contig of 2830 bp in length
            *    41625    41724: gap of unknown length
            *    41725    44453: contig of 2729 bp in length
            *    44454    44553: gap of unknown length
            *    44554    48153: contig of 3600 bp in length
            *    48154    48253: gap of unknown length
            *    48254    51286: contig of 3033 bp in length

PT New isolated oligonucleotides for accurately diagnosing West Nile virus
PT infection or for capturing, detecting and quantitating West Nile virus in
PT blood samples.
XX
PS Claim 1; SEQ ID NO 53; 56pp; English.
XX
CC The invention relates to an isolated oligonucleotide not more than 60
CC nucleotides in length comprising a nucleotide sequence (S1) of at least
CC 10 contiguous nucleotides from any of the 28 nucleotide sequences (e.g.
CC 20, 21 or 23 bp) given in the specification derived from the West Nile
CC Virus (WNV) genome, a nucleotide sequence (S2) having 90% sequence
CC identity to the nucleotide sequence of (S1), or complements of (S1) and
CC (S2). The oligonucleotide further comprises a detectable label at the 5'-
CC end and/or the 3'-end. The detectable label is a fluorescent label
CC selected from 6-carboxyfluorescein (6-FAM), tetramethyl rhodamine
CC (TAMRA), and 2',4',5',7',-tetrachloro-4-7-dichlorofluorescein (TET). The
CC composition and methods are useful for accurately diagnosing West Nile
CC virus infection or for capturing, detecting and quantitating West Nile
CC virus in biological samples, particularly blood samples. This sequence
CC corresponds to an oligonucleotide probe of the invention.

PT Diagnosing flavivirus infection by contacting a sample from a human or
PT animal with a flavivirus envelope protein domain III polypeptide, and
PT detecting formation of a immunocomplex between the envelope protein and
PT antibodies in the sample.
XX
PS Disclosure; SEQ ID NO 1; 110pp; English.
XX
CC The present invention relates to a method for screening for a flavivirus
CC in a subject or animal host. The method comprises: contacting a sample
CC from the subject with a composition comprising a flavivirus envelope
CC protein domain III polypeptide (ADK13683-ADK13701) under conditions that
CC permit formation of specific immunocomplex between an antibody in the
CC sample and the envelope protein domain III polypeptide; and detecting
CC whether a specific immunocomplex is formed. The present sequence is the
CC coding sequence for West Nile Virus protein, from which E protein
CC envelope protein domain III polypeptide (ADK13683) is derived.

PT New composition comprising two or more isolated polypeptides, useful for
PT preparing a medicament for treating pain in an animal.
XX
PS Claim 1; Page; 1017pp; English.
XX
CC The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a human DNA (shown in Table 2 of the
CC specification) which encodes one of the polypeptides of the invention
CC which is differentially expressed during pain. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic form directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT   Propionibacterium acnes polypeptides and nucleic acids useful for
PT   vaccinating against and diagnosing infections, especially useful for
PT   treating acne vulgaris.
XX
PS   Claim 1; SEQ ID NO 40; 1069pp; English.
XX
CC   Sequences AAS59506-AAS59804 represent DNA molecules encoding
CC   Propionibacterium acnes immunogenic polypeptides. The proteins and their
CC   associated DNA sequences are used in the treatment, prevention and
CC   diagnosis of medical conditions caused by P. acnes. The disorders include
CC   SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and
CC   osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in
CC   infections of bone, joints and the central nervous system, however it is
CC   particularly involved in the inflammatory lesions associated with acne
CC   vulgaris. A method for detecting the presence or absence of P. acnes in a
CC   patient comprises contacting a sample with a binding agent that binds to
CC   the proteins of the invention and determining the amount of bound protein
CC   in the sample. The polypeptides may be used as antigens in the production
CC   of antibodies specific for P. acnes proteins. These antibodies can be
CC   used to downregulate expression and activity of P. acnes polypeptides and
CC   therefore treat P. acnes infections. The antibodies may also be used as
CC   diagnostic agents for determining P. acnes presence, for example, by
CC   enzyme linked immunosorbent assay (ELISA). This sequence encodes the
CC   polypeptides shown in AAU49156-AAU49883 and AAU67522-AAU67523. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   New Propionibacterium acnes polypeptides and polynucleotides encoding the
PT   polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
PT   or for stimulating an immune response specific for a P. acnes protein.
XX
PS   Claim 1; SEQ ID NO 40; 1481pp; English.
XX
CC   The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
CC   encoding a Propionibacterium acnes protein. The invention also relates to
CC   polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to
CC   immunogenic fragments of P. acnes polypeptides. The invention
CC   additionally encompasses expression vectors and host cells comprising a
CC   polynucleotide of the invention; antibodies against polypeptides of the
CC   invention; fusion proteins comprising a polypeptide of the invention; a
CC   method for stimulating an immune response specific for a P. acnes
CC   polypeptide and an isolated T cell population comprising T cells prepared
CC   via this method; a vaccine composition (comprising P. acnes polypeptides,
CC   polynucleotides, antibodies, fusion proteins, T cell populations, or
CC   antigen-presenting cells that express the polypeptide); a method and kit
CC   for detecting or determining the presence or absence of P. acnes in a
CC   patient; and a method for inhibiting the development of P. acnes in a
CC   patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
CC   proteins, T cell populations or antigen-presenting cells that express the
CC   polypeptides are useful for diagnosing, preventing or treating acne
CC   vulgaris, or for stimulating an immune response specific for a P. acnes
CC   protein. The polynucleotides can also be used as probes or primers for
CC   nucleic acid hybridisation. The vaccine composition is useful for the
CC   stimulation of an immune response against P. acnes, or for treating acne,
CC   and the kit is useful for performing a diagnostic assay. The present
CC   sequence represents a P. acnes DNA contig which is specifically claimed
CC   in the invention. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for
PT   preparing a vaccine composition against Klebsiella pneumoniae.
XX
PS   Disclosure; SEQ ID NO 5392; 932pp; English.
XX
CC   The invention describes a new isolated nucleic acid encoding a Klebsiella
CC   pneumoniae polypeptide. Also described are: a recombinant expression
CC   vector comprising the nucleic acid, operably linked to a transcription
CC   regulatory element; and a cell comprising the recombinant expression
CC   vector. The nucleic acid is useful for preparing a vaccine composition
CC   against Klebsiella pneumoniae. This sequence encodes a Klebsiella
CC   pneumoniae polypeptide of the invention

PT   Isolated and purified hepatitis E virus strain SAR-55 DNA - encodes
PT   antigenic protein useful in diagnosis, prophylaxis and treatment of
PT   hepatitis E virus infection.
XX
PS   Claim 2; Page 16-21; 121pp; English.
XX
CC   The present sequence is the cDNA of the hepatitis E virus (HEV) strain
CC   SAR-55, which was implicated in an enterically transmitted non-A, non-B
CC   hepatitis in Pakistan. The protein encoded by the structural region of
CC   the virus (i.e. ORF-2), which is capable of forming HEV like particles,
CC   is useful for the detection of HEV antibodies (pref. IgG or IgM) in
CC   blood, plasma, sera, cerebrospinal fluid, tissue, urine or pleural fluid.
CC   The protein, and anti-HEV antibodies generated using the protein, can
CC   also be used in vaccines for immunising an animal against HEV infection.
CC   The protein is identified as a band of greater than 50 kD following SDS-
CC   PAGE of cell lysates of insect cells infected with a HEV ORF-2 contg.
CC   baculovirus, i.e. the claimed recombinant expression vectors pPIC9-1779,

PT   in detection, diagnosis, vaccines and therapy of hepatitis E virus
PT   infection.
XX
PS   Claim 2; Page 16-20; 114pp; English.
XX
CC   This sequence represents the genomic sequence of the hepatitis E virus
CC   (HEV) strain SAR-55. This sequence contains three open reading frames
CC   (ORFs). The proteins encoded by this sequence can be used to stimulate
CC   the production of protective antibodies upon injection into a mammal that
CC   would serve to protect the mammal upon challenge with wild type HEV. The
CC   proteins can be used for detection and diagnosis of HEV infection. This
CC   cDNA was isolated from primates innoculated with stool suspensions
CC   obtained from hepatitis E patients. (Updated on 25-MAR-2003 to correct PN
CC   field.) (Updated on 16-OCT-2003 to standardise OS field)

PT   New hepatitis E virus DNA from Pakistani strain SAR-55 - used for, e.g.
PT   developing products for diagnosis of, and vaccination against hepatitis E
PT   virus infection.
XX
PS   Disclosure; Page 126-131; 204pp; English.
XX
CC   This represents a DNA sequence designated SAR-55 encoding hepatitis E
CC   virus (HEV) ORF proteins ORF-1, ORF-2 and ORF-3. A host organism
CC   transformed or transfected with a recombinant expression vector
CC   containing the SAR-55 nucleic acid can be used to produce the HEV
CC   proteins, especially ORF-2 protein. The recombinant HEV proteins can be
CC   used as diagnostic agents and as vaccines for use against HEV infection.
CC   The detection of antibodies specific for HEV can be used for the
CC   diagnosis of infection and diseases caused by HEV, and for monitoring the
CC   progression of such disease. Such methods are also useful for monitoring
CC   the efficacy of therapeutic agents during the course of treatment of HEV
CC   infection and disease in a mammal. The antibodies can be used for
CC   detection or for passive immunisation of mammals

XX
CC   This invention relates to a novel nucleic acid molecule encoding the
CC   human hepatitis E virus (HEV), where the molecule is capable of
CC   expressing the virus when transfected into cells. In particular, full-
CC   length cDNA clones of the Sar-55 (Pakastani) strain of HEV that are
CC   infectious in primates are disclosed. The novel DNA sequences and the
CC   proteins encoded by them may enable the identification of antiviral
CC   agents for HEV. In addition they may be useful for the development of
CC   vaccines and diagnostic assays for HEV. The vaccines and compounds
CC   identified or developed may have virucidal, hepatotropic or
CC   antiinflammatory activities. They may therefore be useful for the
CC   treatment of HEV infection in mammals. The present sequence is that of
CC   the full length SK-HEV-3 (a variant form) HEV Sar-55 strain cDNA. This
CC   variant form contains a G to T substitution at position 7106 and a T to C
CC   substitution at position 7181 when compared to the wild-type sequence and
CC   encodes a for of the virus which is attenuated for chimpanzees and unable
CC   to infect rhesus monkeys.

PT Combination of polynucleotide probes, useful as array elements in a
PT microarray for monitoring the expression of a number of target
PT polynucleotides.
XX
PS Claim 1; SEQ ID NO 178; 65pp; English.
XX
CC The invention relates to a combination which, comprises a number of
CC polynucleotide probes comprising a sequence selected from one of the 1490
CC sequences mentioned in the specification. The combination is useful as an
CC array element in a microarray for monitoring the expression of a number
CC of target polynucleotides. The microarray is particularly useful in the
CC diagnosis and treatment of cancer and immunopathology and neuropathology.
CC The microarray is useful in diagnostics and treatment regimens, drug
CC discovery and development, toxicological and carcinogenicity studies,
CC forensics and pharmacogenomics. The microarray is also useful for
CC monitoring progression of diseases and for developing sophisticated
CC profiles for the effects of currently available therapeutic drugs. The
CC combination is also useful for purifying a subpopulation of mRNAs, cDNAs
CC and genomic fragments and in research and diagnostic applications. The
CC array can detect changes in expression in a large number of genes coding
CC for different signaling pathway populations which can be used to diagnose
CC various diseases including cancer e.g. adenocarcinoma and leukaemia,
CC immunopathies e.g. AIDS and asthma, neuropathies e.g. Alzheimer's disease
CC and Parkinson's disease. The present sequence represents a polynucleotide
CC probe of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification but was obtained in electronic
CC format directly from USPTO at

PT New composition comprising polynucleotide probes, useful as array
PT elements in a microarray for monitoring the expression of target
PT polynucleotides or purifying a subpopulation of mRNAs, cDNA, or genomic
PT fragments.
XX
PS Claim 6; SEQ ID NO 178; 73pp; English.
XX
CC The invention relates to a composition of polynucleotide probes
CC comprising first polynucleotide probes comprising at least a portion of a
CC gene encoding a receptor-like polypeptide, second polynucleotide probes
CC comprising at least a portion of a gene encoding a transducing
CC polypeptide and third polynucleotide probes comprising at least a portion
CC of a gene encoding an effector-like polypeptide. The probes of the
CC composition are useful as array elements in a microarray for monitoring
CC the expression of target polynucleotides. The microarray is useful in the
CC diagnosis and treatment of cancer, an immunopathology or a
CC neuropathology. It can also be used for drug discovery and development,
CC toxicological and carcinogenicity studies, forensics or pharmacogenomics.
CC Microarrays can also be used for monitoring the progression of diseases
CC that may be associated with the altered expression of signalling pathway
CC polypeptides. The composition can also be used to purify a subpopulation
CC of mRNAs, cDNAs, or genomic fragments in a sample. The expression profile
CC is also useful for the diagnosis and treatment of cancer, e.g. cancers of
CC the adrenal gland, bladder, bone, bone marrow, brain, breast or cervix,
CC an immunopathology, e.g. AIDS, diabetes, pancreatitis, osteoporosis or
CC ulcerative colitis, or a neuropathology, e.g. dementia, amnesia,
CC epilepsy, Alzheimer's disease or depression. This sequence represents a
CC human polynucleotide probe of the invention. Note: The sequence data for
CC this patent did not form part of the printed specification but was
CC obtained in electronic format directly from USPTO at

PT New human genome-derived single exon nucleic acid probes useful for human
PT gene expression analysis, for identifying or characterizing alternative
PT splicing events, for assessing genomic alterations or as tools for
PT surveying tissues.
XX
PS Claim 1; SEQ ID NO 14441; 80pp; English.
XX
CC The invention relates to a nucleic acid probe for measuring human gene
CC expression, comprising any of the 27,400 fully defined nucleotide
CC sequences in the specification, or their complements or fragments, and
CC encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC fully defined in the specification. The probe is a single exon probe that
CC hybridises under high stringency conditions to a nucleic acid molecule
CC expressed in human cells or tissues. Also included are a spatially-
CC addressable set of single exon nucleic acid probes for measuring human
CC gene expression (comprising a plurality of single exon nucleic acid
CC probes cited above, where each of the plurality of probes is separately
CC and addressably isolatable or amplifiable from the plurality), a single
CC exon microarray for measuring human gene expression, a method of
CC measuring human gene expression, a vector comprising the single exon
CC probe cited above, an ORF-encoded peptide comprising at least 8
CC contiguous amino acids of any of the above- mentioned amino acid
CC sequences (optionally with conservative amino acid substitutions), an
CC isolated antibody that binds specifically to a peptide cited above,
CC methods of selling and/or licensing single exon probes or microarrays to
CC a customer desiring to measure gene expression, a method of providing
CC human gene expression data by subscription, and a computer-readable
CC storage medium which contains a database having a plurality of records
CC (each record including data on the expression of a single exon probe
CC cited above. The probe, methods and apparatus are useful in gene
CC expression analysis. The probes may be used as tools for surveying
CC tissues to detect the presence of expressed messages that contain their
CC specific exon, or in constructing genome-derived single exon microarrays.
CC In addition, the probes are used in identifying and characterising
CC alternative splicing events, in detecting and characterising gross
CC alterations in the genomic locus that includes their exon, in assessing
CC smaller genomic alterations, in priming the synthesis of nucleic acids,
CC or in expressing the ORF-encoded peptide. The present sequence is a human
CC single exon probe of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030194704

PT Novel polynucleotide encoding colon tumor polypeptides, useful as
PT vaccines for treating colon cancers.
XX
PS Claim 1; Page 166; 425pp; English.
XX
CC The invention relates to isolated polynucleotides (I) encoding colon
CC tumour polypeptides (II). (I) is useful for stimulating an immune
CC response in a patient and treating colon cancer in a patient.
CC Oligonucleotides derived from (I) are useful for determining the presence
CC of cancer in a patient. (I) and (II) are useful in pharmaceutical
CC compositions, e.g. vaccines, and other compositions for the diagnosis and
CC treatment of colon cancer. A composition comprising a first component
CC selected from physiologically acceptable carriers and immunostimulants,
CC and an antigen-presenting cell expressing (II) is useful for inhibiting
CC development of cancer in a patient. (I) is useful in the design and
CC preparation of ribozyme molecules for inhibiting expression of tumour
CC polypeptides and (I). ABK54531-ABK55464 represent human colon cancer cDNA

PT New polynucleotide sequences obtained from various cDNA libraries, useful
PT as hybridization probes, as oligomers for PCR, for chromosome and gene
PT mapping, in the recombinant production of protein, or in generating
PT antisense DNA or RNA.
XX
PS Claim 1; SEQ ID NO 16087; 44pp; English.
XX
CC The invention relates to an isolated polynucleotide comprising any one of
CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC determined by the technique of SBH (sequencing by hybridisation). Also
CC included is a purified polypeptide comprising a sequence corresponding to
CC a reading frame of the novel polynucleotide. The nucleic acid sequences
CC are useful in diagnostics as expressed sequence tags (EST) for
CC identifying expressed genes or for physical mapping of the human genome,
CC in forensics, in assessing biodiversities, or in identifying mutations
CC responsible for genetic disorders and other traits. The nucleotide
CC sequences are also useful as hybridisation probes, as oligomers for PCR,
CC for chromosome and gene mapping, in the recombinant production of
CC protein, or in generating antisense DNA or RNA. The purified polypeptide
CC is useful for generating antibodies specific for it. The present sequence
CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030073623

XX
PT   New human genome-derived single exon nucleic acid probes useful for human
PT   gene expression analysis, for identifying or characterizing alternative
PT   splicing events, for assessing genomic alterations or as tools for
PT   surveying tissues.
XX
PS   Claim 15; SEQ ID NO 737; 80pp; English.
XX
CC   The invention relates to a nucleic acid probe for measuring human gene
CC   expression, comprising any of the 27,400 fully defined nucleotide
CC   sequences in the specification, or their complements or fragments, and
CC   encoding at least 8 amino acids of any of the 6888 amino acid sequences
CC   fully defined in the specification. The probe is a single exon probe that
CC   hybridises under high stringency conditions to a nucleic acid molecule
CC   expressed in human cells or tissues. Also included are a spatially-
CC   addressable set of single exon nucleic acid probes for measuring human
CC   gene expression (comprising a plurality of single exon nucleic acid
CC   probes cited above, where each of the plurality of probes is separately
CC   and addressably isolatable or amplifiable from the plurality), a single
CC   exon microarray for measuring human gene expression, a method of
CC   measuring human gene expression, a vector comprising the single exon
CC   probe cited above, an ORF-encoded peptide comprising at least 8
CC   contiguous amino acids of any of the above- mentioned amino acid
CC   sequences (optionally with conservative amino acid substitutions), an
CC   isolated antibody that binds specifically to a peptide cited above,
CC   methods of selling and/or licensing single exon probes or microarrays to
CC   a customer desiring to measure gene expression, a method of providing
CC   human gene expression data by subscription, and a computer-readable
CC   storage medium which contains a database having a plurality of records
CC   (each record including data on the expression of a single exon probe
CC   cited above. The probe, methods and apparatus are useful in gene
CC   expression analysis. The probes may be used as tools for surveying
CC   tissues to detect the presence of expressed messages that contain their
CC   specific exon, or in constructing genome-derived single exon microarrays.
CC   In addition, the probes are used in identifying and characterising
CC   alternative splicing events, in detecting and characterising gross
CC   alterations in the genomic locus that includes their exon, in assessing
CC   smaller genomic alterations, in priming the synthesis of nucleic acids,
CC   or in expressing the ORF-encoded peptide. The present sequence is a human
CC   single exon probe of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030194704

PT   Hepatitis C virus antigen expressed as recombinant in E.coli - useful for
PT   diagnosis of hepatitis C virus infection.
XX
PS   Claim 2; Page 7; 66pp; Japanese.
XX
CC   The sequences given in AAQ26981-7001 are hepatitis C virus genes. These
CC   genes can each be used to prepare recombinant vectors by ligating the
CC   gene of interest in to a vector to be expressed in E. coli. The
CC   polypeptides encoded by these genes are useful as diagnostic reagents for
CC   type C hepatitis and they may be produced efficiently by recombinant
CC   methods

PS Claim 12; SEQ ID NO 53; 292pp; English.
XX
CC The present invention relates to the isolation of human receptors and
CC membrane-associated proteins (REMAP, designated REMAP-1 to REMAP-49), and
CC the polynucleotide sequences encoding them. Also disclosed are expression
CC vectors, host cells, antibodies, agonists, and antagonists. The
CC polypeptide and polynucleotide sequences of the invention are useful for
CC diagnosing, treating, and preventing disorders associated with aberrant
CC expression of REMAP. Such disorders include cell proliferative disorders,
CC autoimmune disorders, inflammatory disorders, neurological disorders,
CC infections, developmental disorders, nervous system disorders, mental
CC disorders, metabolic disorders etc. The present sequence represents a
CC REMAP polynucleotide sequence of the invention.

XX
CC   The present invention relates to the isolation of novel human secreted or
CC   membrane-associated proteins and the genes encoding them. The sequences
CC   of the invention are useful for treating, preventing and ameliorating
CC   various diseases such as inflammatory disorders (e.g. asthma),
CC   neurological disorders (e.g. dementia), haematopoietic disorders,
CC   skeletal developmental disorders, growth abnormalities, neurodegenerative
CC   disorders (e.g. Huntington's disease), nervous system disorders,
CC   autoimmune disorders (e.g. rheumatoid arthritis), peripheral
CC   myelinopathies, viral and bacterial infections, alpha-mannosidosis,
CC   diabetes, cancers, malignant tumours, hyper- and hypotension, obesity,
CC   bulimia, anorexia, manic depression, delirium, mental retardation,
CC   Tourette's syndrome, schizophrenia, growth, mental or sexual development
CC   disorders, and dysfunctions of the blood cascade system including those
CC   leading to stroke. ABK35582-ABK35609 represent the genes encoding the
CC   novel human secreted or membrane-associated proteins of the invention

PT   New NOVX polypeptides and nucleic acid molecules useful for preventing or
PT   treating NOVX-associated disorders, e.g. cancer, diabetes, infection or
PT   obesity, and in chromosome mapping, tissue typing or pharmacogenomics.
XX
PS   Example 11; SEQ ID NO 303; 1880pp; English.
XX
CC   The invention relates to a novel isolated polypeptide (NOVX). A
CC   polypeptide of the invention has cytostatic, immunomodulator,
CC   neuroprotective, nootropic, anorectic, antidiabetic, antimicrobial, and
CC   antilipaemic activity, and may have a use in gene therapy, and as a
CC   vaccine. The polypeptides are encoded by NOVX polynucleotides comprising
```

```
CC   any of the 303 fully defined nucleotide sequences given in the
CC   specification. The polypeptide is useful in the manufacture of a
CC   medicament for treating a syndrome associated with a human disease. The
CC   polypeptide, polynucleotide and antibody are useful in diagnosing,
CC   treating or preventing NOVX-associated disorders, e.g. cancer, cachexia,
CC   Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious
CC   diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are
CC   further used as hybridisation probes, in chromosome mapping, tissue
CC   typing, preventive medicine, and pharmacogenomics. The present sequence
CC   encodes a NOVX polypeptide of the invention.

PT   Diagnostic reagent for hepatitis C virus - comprises second envelope
PT   protein or first non-structural protein encoded by HCV gene and has sugar
PT   chain.
XX
PS   Claim 8; Page 23-26; 58pp; English.
XX
CC   Glycoprotein E2/NS1 is derived from the second envelope protein or first
CC   non-structural protein encoded by the genome of HCV. The nucleic acid is
CC   extracted from the serum of the patient of hepatitis C. The serum is
CC   pref. mixed with transfer RNA (tRNA) as a carrier of virus RNA. As a
CC   technique of cloning cDNA from the nucleic acid, it is preferred to use
CC   polymerase chain reaction method. In the reaction, any commercially
CC   available random primers or synthesized DNA having a base sequence
CC   similar to that of primer AS1 may be used as a primer. Representative
CC   examples of sense primers include S1. (Updated on 25-MAR-2003 to correct
CC   PN field.)

PT   New lipid metabolism proteins and nucleic acids, useful in producing
PT   transgenic plants with increased levels of seed storage compound, e.g.
PT   lipid, a fatty acid, a starch or a seed storage protein.
XX
PS   Claim 1; SEQ ID NO 61; 115pp; English.
XX
CC   The invention relates to novel isolated lipid metabolism proteins (LMP)
CC   and encoding nucleic acids comprising a polynucleotide sequence encoding
CC   a polypeptide that functions as a modulator of seed storage compounds in
CC   a plant. The LMP nucleic acid is useful in producing transgenic plants
CC   with increased levels of seed storage compound, e.g. lipid, a fatty acid,
CC   a starch or a seed storage protein, as markers for specific regions of
CC   the genome and for evolutionary and protein structural studies. The
CC   present sequence represents an LMP nucleic acid of the invention.

PT   Altering plant characteristics, useful for producing plants for enzyme or
PT   pharmaceutical production comprises modifying in a plant, expression of
PT   one or more nucleic acids and/or modifying level or activity of one or
PT   more proteins.
XX
PS   Claim 1; SEQ ID NO 2379; 134pp; English.
XX
CC   This invention relates to a novel method for altering one or more plant
CC   characteristics. Specifically, it refers to identifying genes that are up
CC   - or down-regulated in transgenic plants overexpressing the heterodimeric
CC   E2Fa/DPa transcription factor of Arabidopsis and using these sequences to
CC   alter plant characteristics accordingly. The present invention describes
CC   generating transgenic plants for the production of growth regulators,
CC   enzymes, therapeutics, pharmaceuticals and animal feed products, where
CC   the altered plant characteristics are selected from increased yield or
CC   biomass, enhanced survival capacity, stress tolerance, plant architecture
CC   or physiology, altered endoreduplication, biochemistry, signal
CC   transduction, storage lipid mobilisation and/or altered photosynthesis,
CC   each relative to the corresponding wild type plants. Accordingly, these
CC   sequences can also be useful as positive or negative selectable markers
CC   during transformation of cells or tissues. The identified genes play a
CC   role in a variety of biological processes such as DNA replication, cell
CC   wall biosynthesis, nitrogen and/ or carbon metabolism or they function as
CC   transcription factors. This polynucleotide sequence is thale cress cDNA
CC   repressed 1.3 fold or more in plants overexpressing the E2Fa/DPa
CC   transcription factor, given in an exemplification of the invention.

PT   Determining the presence of non-normal or abnormal breast cells in a
PT   sample from a human subject comprises assaying for the expression of
PT   biomarkers for breast cancer, particularly CRIP1, HN1 or ESE-2/ELF5
PT   sequences.
XX
PS   Disclosure; SEQ ID NO 197; 128pp; English.
XX
CC   This invention relates to methods for determining the presence of
CC   abnormal breast cells based upon the identification of three novel
CC   biomarkers. Specifically, it refers to three genes that are
CC   differentially expressed in breast cancer. Two genes are more highly
CC   expressed in breast cancer, namely the human cysteine rich intestinal
CC   protein 1 (CRIP1), which is also known as the human cysteine rich heart
CC   protein (HCRHP) that has been mapped to chromosome 7q11.12 and secondly
CC   the haematological and neurological expressed sequence 1 (HN1 or Hn1).
CC   The third gene exhibits decreased expression in abnormal breast cells and
CC   has been identified as the second epithelium restricted Ets transcription
CC   factor (ESE-2), where ESE-2b is identical to the E74 like factor 5
CC   (ELF5). The present invention describes a method for correlating a
CC   molecular expression phenotype with a physiological state of abnormal
CC   breast cells. Accordingly, this method provides a non-subjective means
CC   for detecting abnormal breast cells, and as is advantageous over
CC   histomorphological or cytological criteria for assessing breast cancer.
CC   This polynucleotide sequence is a human haematological and neurological
CC   expressed sequence 1 cDNA clone, a biomarker of the invention.

/note="Vector: pBluescript SK+; Site_1: EcoRI (5'-end of cDNA); Site_2: XhoI (3'-end of cDNA); pericarp 0-7 DAP(days after pollination). Due to a cloning artefact caused by the kit, in most cases the EcoRI site is NOT present, as well as the EcoRIadapter used for cloning. To excise the insert, restriction sites upstream EcoRI should be used (e.g. BamHI, SalI,PstI). NOTE: Also due to the cloning system used Blue/white selection for recombinats is not 100% reliable.Average insert size is 900 bp"

            Sequences were basecalled with phred and vector was masked with
            crossmatch (see http://www.phrap.org). Sequences were then trimmed
            from both ends to remove low quality bases and masked vector.
            Plate: 02  row: e  column: 4
            Seq primer: T7.

                     XhoI; This library, constructed by John Davies and Jeffrey
                     McDermott, combines cDNAs from CC-1690 cells grown to
                     mid-log phase in TAP (acetate-containing) medium in the
                     light, TAP medium in the dark, HS (minimal) medium in
                     ambient levels of CO2 and HS medium bubbled with 5% CO2.
                     PolyA mRNA was purified from each sample, pooled and cDNA
                     synthesized. The cDNA was directionally cloned into lambda
                     ZAP II (Stratagene) in the EcoRI (5') and XhoI (3') sites.
                     pBluescript II SK- plasmids were excised from the lambda
                     ZAP clones by superinfection with ExAssist (Stratagene)
                     phage. The library was normalized using method 4 described
                     in Bonaldo et al (1996) Genome Research 6: 791-806."

            RNA prepared and library constructed by W. Walter Lorenz (School of
            Forest Resources, University of Georgia); plant material prepared
            by Craig Zimmermann (School of Forest Resources, University of
            Georgia) using rooted cuttings provided by the Forest Biology
            Research Cooperative (FBRC) and the CCLONES project a the
            University of Florida; sequencing done in the Laboratory for
            Genomics and Bioinformatics, University of Georgia. Sequence ends
            have been trimmed to exclude vector and regions below Phred quality
            16. Three-prime sequences are presented as their reverse complement
            and have been trimmed to exclude polyA.
            Seq primer: M13-21 (TGTAAAACGACGGCCAGT)
            POLYA=Yes.

                      /note="Organ: Root; Vector: pSL1180; Site_1: EcoRI;
                      Site_2: XhoI; The library was prepared from polyA+ RNA
                      from the roots of 1-year-old loblolly pine (Pinus taeda)
                      cuttings that were rooted and then planted in washed sand.
                      The rooted cuttings were maintained for 135 days (July
                      2003 harvest) under ambient conditions in a local
                      greenhouse. They were kept on a weekly regimen of 0.5x
                      nutrient-complete Hoagland's solution and supplemented
                      with additional water sufficient to maintain a 15% soil
                      moisture content. Twenty-four hours (24h) prior to
                      harvesting roots for mRNA preparation, the potted trees
                      were watered with 250 mM NaCl(aq) until the sand was
                      saturated. Double-stranded cDNA was cloned
                      unidirectionally into pSL1180. Inserts can be excised with
                      EcoRI (5' end) and XhoI (3' end)."

                      /sex="male, hermaphrodite"
                      /dev_stage="embryos, L1, L2, L3, L4, adult, dauer"
                      /clone_lib="AD-wrmcDNA library"
                      /note="Vector: pPC86; For the purpose of protein
                      interaction mapping, we generated a C. elegans cDNA
                      library (AD-wrmcDNA) in which poly(dT)-primed reverse
                      transcribed cDNA are fused to the AD-encoding sequence of
                      the yeast transcription factor GAL4. This library was made
                      with poly(A)+ RNA isolated from mated populations of
                      wild-type (N2 strain) animals of all stages of development
                      including embryonic, larval (L1 to L4 stages), adults and
                      dauer. Approximately equal quantities of RNA from
                      different populations were acquiered. cDNAs were generated
                      and cloned into the two hybrid vector pPC86. The library
                      contains ~3*10e7 clones. Reference - GATEWAY

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
